

## Salient Select Opportunity Fund

### *Statement Pursuant to Section 19(a) of the Investment Company Act of 1940*

On June 27, 2016, Salient Select Opportunity Fund paid a distribution on its Investor Class, Institutional Class, Class A and Class C shares of \$0.21752, \$0.23999, \$0.21501 and \$0.18776 per share, respectively, to shareholders of record at the close of business on June 24, 2016. Under U.S. generally accepted accounting principles ("GAAP"), the fund estimates that 13.01% of that distribution is paid from capital surplus (i.e., a "return of capital"). A return of capital may occur when the dividends received by the fund from its real estate investment trust (REIT) investments are reclassified as return of capital. A return of capital also may occur when the dividends received by the fund are from other types of equity related holdings that pass through income not characterized as ordinary income. A return of capital distribution does not necessarily reflect a fund's investment performance and should not be confused with "yield," "income" or "profit." You should not draw any conclusions about the fund's investment performance from the amount of this distribution.

The amount and sources of distributions reported in this notice are only estimates in order to comply with SEC regulations and are not being provided for tax reporting purposes. The characterization of fund distributions for federal income tax purposes is different from the GAAP characterization presented above. The determination of what portion of each year's distributions constitutes ordinary income, qualifying dividend income, short- or long-term capital gains or return of capital is reported to shareholders on Form 1099-DIV, which is mailed in early 2017 for the 2016 calendar year. This notice is for informational purposes only.

#### **RISKS**

**There are risks involved with investing, including loss of principal. Past performance does not guarantee future results, share prices will fluctuate and you may have a gain or loss when you redeem shares.**

**Borrowing for investment purposes creates leverage, which can increase the risk and volatility of a fund.**

**Debt securities are subject to interest rate risk. If interest rates increase, the value of debt securities generally declines. Debt securities with longer durations tend to be more sensitive to changes in interest rates and more volatile than securities with shorter durations.**

**Derivative instruments involve risks different from those associated with investing directly in securities and may cause, among other things, increased volatility and transaction costs or a fund to lose more than the amount invested.**

**Foreign securities, especially emerging or frontier markets, will involve additional risks including exchange rate fluctuations, social and political instability, less liquidity, greater volatility and less regulation.**

**Investing in a non-diversified fund involves the risk of greater price fluctuation than a more diversified portfolio.**

**Investing in the real estate industry or in real estate-related securities involves the risks associated with direct ownership of real estate which include, among other things, changes in economic conditions (e.g., interest rates), the macro real estate development market, government intervention (e.g., property taxes) or environmental disasters. These risks may also affect the value of equities that service the real estate sector.**

**Investing in smaller companies generally will present greater investment risks, including greater price volatility, greater sensitivity to changing economic conditions and less liquidity than investing in larger, more mature companies.**

The series of funds under the Forward Funds trust ("Salient Funds") are distributed by Forward Securities, LLC.
