

Grades: Quintile rankings of asset classes
 Downgrade Upgrade No Change

Trend: 12-month momentum
Carry: Current yield / current std. deviation

Risk: Based on 60-day std. deviation

U.S. Treasurys **Yield:** 2.55% **Risk:** 3.05%

TREND	CARRY	Treasurys may be the purest way to express an interest rate position. As a result, this asset class represents the tip of the spear on the future of interest rates. If you must hold Treasurys, we believe short duration/cash-like is best..
F	F	

U.S. Investment Grade Credit **Yield:** 3.68% **Risk:** 3.25%

TREND	CARRY	Things are looking a bit bleak for this asset class as volatility picked up slightly in February and March. This change just reinforces our belief that high-yield corporates are better in the current environment.
D	D	

Municipal Bonds **Yield:** 2.68% **Risk:** 1.75%

TREND	CARRY	Muni bonds have improved since last month and look pretty good compared to Treasurys. However, managing duration of this asset class is important as they tend to be longer in duration than Treasurys. Barring a recession, look to high-yield munis instead.
C	C	

High-Yield Municipal Bonds **Yield:** 5.26% **Risk:** 2.90%

TREND	CARRY	This asset class is riskier than rated muni bonds, but barring a recession (which seems unlikely at this juncture), we believe high-yield municipal bonds are a good alternative to any investment-grade holding. If you are looking for safe cash flow, we think this asset class is likely the best opportunity.
B	B	

U.S. High-Yield Corporate Bonds **Yield:** 6.19% **Risk:** 3.06%

TREND	CARRY	Given the stability of the economy and the likelihood of increasing interest rates down the road, U.S. high-yield corporate bonds are one of our favorite asset classes. We expect this asset class to be a relative outperformer for the year.
B	B	

Emerging Market Corporate Debt **Yield:** 6.42% **Risk:** 1.98%

TREND	CARRY	EM corporate debt is one of our favorite asset classes for 2018. The low price volatility and high current income makes this asset class very attractive.
A	A	

Emerging Market Sovereign Debt **Yield:** 5.50% **Risk:** 4.03%

TREND	CARRY	There are many reasons to like emerging market assets, but this asset class is getting overpriced relative other bonds. Look to EM corporate debt instead.
C	C	

International Sovereign Debt **Yield:** 0.69% **Risk:** 6.13%

TREND	CARRY	This asset class has been a great performer, but has volatility similar to stocks and a yield that offers very little cover in the case of interest rates rising, which they have been. A pullback in currency values could lead to a very sharp decline, such as the near 4% drawdown in September.
A	F	

Mortgages **Yield:** 3.30% **Risk:** 2.78%

TREND	CARRY	Mortgages continue to struggle in a rising rate environment. We have seen a downgrade in trend as the course of interest rate increases becomes more visible. Due to this macro trend, mortgages most likely do not belong in an income portfolio.
F	D	

Short Term Treasurys (Cash Proxy) **Yield:** 2.29% **Risk:** 0.73%

TREND	CARRY	Right now we would prefer credit risk over short duration, but in the event of recessionary environment, cash is starting to look very attractive.
D	A
